# TASHEV TRANS LTD puts its trust in RINGTREAD BLACKLINE ENERGECO+

## Low rolling resistance, high mileage and unrivalled life

**Tashev Trans** is a family-owned company that was established in late 2000 and it has rapidly developed to become one of the major players in the Bulgarian transport sector.

Currently Tashev Trans manages an owned fleet of 100 vehicles of different types and it employs more than 150 people. The fleet's major competences are the consolidation and transport of partial shipments (LTL), transport of hazardous materials and waste, steel products, high volume loads and of course general palletized goods. The main deposit in Vratsa has over 2000 m<sup>2</sup> of storage and warehousing space in order to provide to the customers with the full range of logistics services.

The fleet consists of 70 x 13.60 units Scania / Krone and 30 roadtrains.

ENERGECO+**

Tashev Trans Ltd demands two things from all of its tyres: high mileage, and a tread pattern capable of withstanding the stress of their horsepower vehicles. When using new premium tyres, the choice of an efficient retreading policy is a strategic need, one that can both ensure lower fuel consumption and higher mileage, allowing the casings to express their full potential.

The **Ringtread Blackline Energeco+** retreads supplied to Tashev Trans Ltd by **Primex Tyres & Service Ltd** have proven to be the ideal response to these requirements.

Primex Ltd is a leading Bulgarian company in the import and distribution of tyres for all types of vehicles, with several modern stores and service centres throughout the country.

Since 2005, Primex Ltd has also been dealing with truck tyre retreading, using precured treads supplied by Marangoni, and with a production capacity of around 50,000 tyres per year.

The results achieved with **Ringtread Blackline Energeco+** have significantly surpassed the expectations of Tashev Trans Ltd: the treads, fitted on the drive axle, have guaranteed more than 10,000 km per mm, in other words, more than 160,000 km per tyre, while at the same time improving fuel consumption compared to the previously-used similar competing-brand premium product.

An excellent result, which has achieved the dual objective set by Tashev Trans: reduced rolling resistance, above all over long distances, and at the same time very high mileage, all without compromising on other key factors.
